

Assignment 3 Deliverable I – Peer Design Review ENSF 619 – Software Design and Architecture I

Due: Before 12:00 PM on Friday February 15

Names of the presenting group/Person:

| | Names of reviewing Group/Person | Comments /questions about of the reviewing group about the design documents | Responses by the presenting Group |
|---------------------------|---------------------------------|--|--|
| 1 st Review | Oscar/Savith -> Eiden | Class relationships are appropriate, not too busy or too empty. Key attributes and methods available on class diagrams. Small clarification on package dependency needed. Clean code, good java doc and commenting in line. | Will make changes to the class diagram to make the relationships more clear. |
| 2 nd Review | Oscar/Savith -> Charles | ViewController data members can be made private instead of protected The shared package is not the Model in MVC, Model should be part of the server (database controller). Code looks good. | Yes, you're right. I made it protected so I could use it from the Client class, but a better practice would have been to use getters and setters Ok let's clarify this with Dr. Moshirpour because I think he's said repeatedly that the model is the Customer class not the database. I could have misunderstood but it's written down in my notes a couple of times |
